

Addendum #1
RFQ #11-20, Wastewater Collection System Program Consulting Services
November 15, 2019

NOTICE IS HEREBY GIVEN that the following addendum serves to provide clarification and to answer the questions received on RFQ #11-20, Wastewater Collection System Program Consulting Services.

Question 1: I am writing to respectfully request the hydraulic models for the wastewater collection and transmission systems to assist in our preparation for this submittal.

Answer to Question 1: The model is currently being developed during the Wastewater Collection System (WWCS) Master Plan project using United States Environmental Protection Agency Storm Water Management Model (USEPA SWMM) engine version 5.1.013 and results are expected to be complete by mid-2020 with the delivery of the Master Plan document. Afterwards, the City intends to hire consultants to update the model every 5 (+/-) years alongside the Wastewater Collection System Master Plan updates. In between updates, the City intends to utilize Personal Computer Storm Water Management Model (PCSWMM) internally; however, depending on City resources the selected consultant may be tasked with performing hydraulic modeling services on an as-needed basis. Therefore, hydraulic modeling is not expected to play a significant role in this project as the previously mentioned Master Plan is expected to identify and recommend improvements for this project to implement.

Since the model is not available for all respondents, no points will be given to any firm providing details related to the model currently under development.
